future

Bidfood Belgium

As we move towards a net-zero goal, alternate environmentally efficient transport methods need to be investigated and employed. The use of electric vehicles by Bidfood is one such option. Bidfood currently uses 24 electric vehicles, in most instances still on a trial basis, with a view to expand. Alternate fuels are also being explored such as hydrotreated vegetable oil (HVO) (bio-fuel), compressed natural gas (CNG), and battery powered refrigeration solutions.

We won't stop until we have found the right solution to reduce our emissions.

Solar power generated within the group increased by 29% this year. Australia, Belgium and the Netherlands generated 77% of the group's total. New installations this year were completed in New Zealand, Australia, and the Netherlands. The significant benefit to both emissions reduction and cost management has been proven, and operations in South Africa and Spain are now planning solar panel installations.

Bidfood facilitates global waste improvement by supplying packaging ranges that can easily be composted commercially or recycled. Improving waste initiatives such as biomethanation of solid waste, driving internal waste recycling targets, or even adjusting processes to gain efficiencies have delivered positive steps towards reaching our goal. Teams have engaged with external waste management third parties to maximise efficiencies in the pursuit of effective waste management; and great progress has been made within the first year. Rollout of these programmes across the group is now underway.

Waste reduction is a non-negotiable in the net-zero arsenal

A key factor in Bidfood's emission improvements is the move towards 'greener' facilities.

Features of these facilities include modern refrigeration, solar panels, energy efficient lighting, heat recovery processes and insulation, and water wise solutions. These are evidenced in our new facilities in New Zealand, Germany, Netherlands and Australia; with more to come!

Bidfood New Zealand

Bidfood has ambitious goals to not only reduce packaging used but also to make it more sustainable. The detrimental impact single-use plastics have upon our environment makes changing this behaviour a non-negotiable. Targets towards the removal of single-use plastics from our packaging and disposable ranges have already been introduced.

From snack boxes, hot and cold cups, paper straws and bags to serviettes in both recyclable and compostable materials, we have a large range available for our customers to make a difference of their own.
